DETAILED ACTION

1. The amendment filed in Paper No. 5 (filed 9/11/03) has been fully considered and made of record.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 33 is rejected under 35 U.S.C. 102(b) as being anticipated by Wellard (US 4,267,634) hereinafter '634.

As applied to claim 33, the '634 teaches a method for making chip component, comprising:

separating a first chip or thick film resistor (Ch. Fig. 3, element 15) from a second chip or thick film resistor (Ch. Fig. 3, element 15) with a glass or ceramic encapsulant (Cf. Fig. 3, element 13), where each chip resistor comprising a substrate (Cf. Fig. 2, element 13), a resistive element (Cf. Fig. 2, element 15) on the substrate, and first and second end caps electrically connected to opposite ends of the resistive elements (Cf. Fig. 7, elements 27 & 29);

Art Unit: 3729

• connecting the first end cap of the first chip resistor to a first end cap of the second chip resistor with a first metal barrier (Cf. Fig. 7, element 27; column 4, lines 11-13) for mechanical strength and electrical conductivity;

 connecting the second end cap of the first chip resistor to a second end cap of the second chip resistor with a second metal barrier (Cf. Fig. 7, element 27; column 4, lines 11-13), for mechanical strength and electrical conductivity.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 34-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over the '634.

As applied to claims 34 and 35, the '634 teaches the claimed invention except for using alumina for substrate and ruthenium oxide for resistive element.

It would have been an obvious matter of design choice to use alumina for substrate and ruthenium oxide for resistive element, since applicants have disclosed that other types of material may be used for the resistive element and the substrate (Cf. Applicants' disclosure, page 4, last

Art Unit: 3729

sentence) and it appears that the invention would perform equally well with ceramic material as substrate (Cf. column 2, line 38) and any conductive material with determinable impedance for resistive material (CF. column 2, lines 59-61).

As applied to claim 36, the '634 teaches the claimed invention except for having the chip resistor of standard size of approximately 0.250 inches in length.

It would have been an obvious matter of design choice to have the chip resistor of standard size of approximately 0.250 inches in length, since applicants has disclosed that the sizes for thickness and length are given by way of example only (Cf. Applicants' disclosure, page 6, lines 25-27) and it appears that the invention would perform equally well the finished material being then diced or cut into tiny chips (Cf. Fig. 5, element 19; column 1, line 13; column 3, line 20).

As applied to claim 37, the '634 teaches the claimed invention except for using nickel plating due to its high specific heat capacity (Cf. Applicants' disclosure, page 5, last paragraph) as metal barrier. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use nickel plating as metal barrier since it is known in the art that palladium-silver with similar high melting temperature as nickel is deposited as metal barrier on both ends of the chip (Cf. column 3, lines 47-50).

Art Unit: 3729

Response to Arguments

6. Applicants' arguments with respect to cancelled claims 26-32 and new claims 33-37 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Applicants' amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
